DETAILED ACTION (10/732,764)

Remarks

1. This office action is in response to the amendment filed on 06/16/2008.
2. Claims 1, 10 and 19 have been amended by the Applicants.
3. Claims 1, 10 and 19 are now being further amended by the Examiner.
4. Claims 1-17 and 19-26 remain pending and now being allowed (re-numbered as claims 1-25)

EXAMINER'S AMENDMENT

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
6. Authorization for this examiner's amendment was given in a telephone interview with Ronald R. Demsher (Reg# 42,478) on 09/16/2008 to obviate any potential 35 U.S.C. § 112 issues, and to put the claims in condition for allowance.
7. The application has been amended as follows:

IN THE CLAIMS

Please amend claims 1, 10 and 19 as followings:

Claim 1 (Currently amended):

A method of selectively interpreting or translating program code in a computing environment having a target processor and a memory coupled to the target processor, the program code comprising instructions from the instruction set of a subject processor, the method comprising:

decoding said program code;

applying an interpreting algorithm to identify whether said program code is interpretable by a simple interpreter, said simple interpreter incapable of interpreting a subset of instructions from the instruction set of the subject processor;

if said program code contains only instructions in the subset such that the program code is interpretable by the simple interpreter, interpreting the program code using the simple interpreter; and

translating said program code using a translator for non-interpretable subset of instructions when said program code is not interpreted.

Claim 10 (Currently amended)

A computer-readable storage medium having software resident thereon in the form of computer-readable code executable by a target computer to perform the following steps during selective interpretation or translation of program code comprising instructions from an instruction set of a subject processor:

decoding said program code;

applying an interpreting algorithm to identify whether said program code is interpretable by a simple interpreter, said simple interpreter incapable of interpreting a subset of instructions from the instruction set of the subject processor;

if said program code contains only instructions from the subset such that the program code is interpretable by the simple interpreter, interpreting the program code using the simple interpreter; and

translating said program code using a translator for non-interpretable subset of instructions when said program code is not interpreted.

Claim 19 (Currently amended)

A translator/interpreter apparatus for use in a computing environment having a target processor and a memory coupled to the target processor for either translating or interpreting program code from an instruction set of a subject processor, said translator/interpreter apparatus comprising:

a decoding mechanism configured to decode said program code;

an interpreter incapable of interpreting a subset of instructions from the instruction set of the subject processor, and comprising an interpreter mechanism,

wherein the interpreter mechanism is configured to apply an interpreting algorithm to identify whether said decoded program code contains only

instructions from the subset of instructions which the interpreter is capable of interpreting, and, if said program code contains only such instructions, interpreting the program code using the interpreter; and

a translator mechanism configured to translate said decoded program code using a translator for non-interpretable subset of instructions when said program code is not interpreted.

--END OF AMENDMENT--

Allowable Subject Matter

8. Claims 1-17 and 19-26 are allowed. As Applicants point out during the interview on April 8, 2008, the closest cited prior art of Zheng (Zheng et al., "PA-RISC to IA-64 Transparent Execution, No Recompilation", IEEE, March 2000) fails to teach or fairly suggest the method for a method of selectively interpreting or translating program code in a computing environment having a target processor and a memory coupled to the target processor, the program code comprising instructions from the instruction set of a subject processor: decoding said program code; applying an interpreting algorithm to identify whether said program code is interpretable by a simple interpreter, said simple interpreter incapable of interpreting a subset of instructions from the instruction set of the subject processor; if said program code contains only instructions from the subset such that the program code is interpretable by the simple interpreter, interpreting the

program code using the simple interpreter; and translating said program code using a translator for non-interpretable subset of instructions from the instruction set of the subject processor. In as such manners as recited in independent claims 1, 10, 19 and each of the dependent claims are allowable for at least the same reasons.

9. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
